#### **DETAILED ACTION**

#### Continued Examination Under 37 CFR 1.114

1. The Examiner acknowledges Applicant's submission of the response filed on 08/09/04. Claims 1-14 are pending.

## Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in-
- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or (2) a patent granted on an application for patent by another filed in the United States before the
- invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).
- 3. Claims 12-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Kawesch.

Kawesch discloses a method for performing an ophthalmic procedure on a cornea of a patient (Figs.1-5), comprising directing a flow of air above the cornea (200 of Fig.4, also see "over" in line 28 of col.5), from one side of the cornea to another side of the cornea (Figure 4), at a distance so that the cornea is not dehydrated by the flow of air (206 of Fig.4, also see "manually operated... manipulated to direct...flow of... air over" in lines 26-28 of col.5), creating a flap in the cornea (16 of Fig.2), moving the flap to expose a portion of the cornea (16 of Fig.3), ablating a portion of the exposed cornea with a laser beam (102 of Fig.4), moving the flap back onto the cornea (see

Art Unit: 3743

"repositioning the flap" in line 45 of col.2), further comprising adjusting a flowrate of the flow of air (206 of Fig.4, also see "flow rate" in line 31 of col.5), further comprising adjusting a direction of the flow of air (206 of Fig.4, also see "manually operated... manipulated to direct...flow of... air over" in lines 26-28 of col.5).

## Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1-11, are rejected under 35 U.S.C. 103(a) as being unpatentable over Kawesch in view of Glockler.

Kawesch discloses a system used to perform an ophthalmic procedure on a cornea of a patient (Figs.1-5), comprising a light source that can direct a light beam onto the cornea of the patient (102 of Fig.4), and an airflow module (200 of Fig.4) that can direct a flow of air above the cornea of the patient (see "over" in line 28 of col.5), from one side of the cornea to another side of the cornea (Figure 4), at a distance so that the cornea is not dehydrated by the flow of air (206 of Fig.4, also see "manually operated... manipulated to direct...flow of... air over" in lines 26-28 of col.5), further comprising a control console that is coupled to the airflow module (200 of Fig.4, also see "control" in line 57 of col.3), wherein the light source includes a laser (see "laser" in line 24 of col.4), wherein the airflow module creates a laminar flow of air (200 of Fig.4, also see "over" in line 28 of col.5), wherein the airflow module includes an adjustable blade (206 of Fig.4).

Page 4

Regarding claims 1, 3-11 Kawesch lacks a patient support table. Glockler discloses a patient support table (Fig.1). It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the feature taught by Glockler, in the device of Kawesch, because Glockler teaches that "the head of patient P will be firmly supported on, and preferably restrained by an operating table" (see lines 62-63 of col.5 of Glockler).

Regarding claims 2, 8-11 Kawesch lacks a portable stand that supports the airflow module. Glockler discloses a portable stand (see wheels in Fig.1). It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the feature taught by Glockler, in the device of Kawesch, because it would allow for the device to be used in alternative locations, and also because, Kawesch teaches that "drying device 200 may be integrated into a complete laser-based vision surgery apparatus or it may be a separate, retrofit unit" (see lines 17-19 of col.5 of Kawesch).

### Response to Arguments

- 6. Applicant argues that Kawesch does not disclose directing a flow of air above the cornea at a distance so that the cornea is not dehydrated, however, Kawesch discloses such (see 206 of Figure 4, also see "manually operated...manipulated to direct...flow of... air over" in lines 26-28 of col.5).
- 7. Applicant argues that Kawesch does not disclose directing a flow of air above the cornea from one side of the cornea to another side of the cornea, however, Kawesch discloses such (see Figure 4).

## Conclusion

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fadi H. Dahbour whose telephone number is 703-306-5479. The examiner can normally be reached on M-F, 9am-5:30pm est.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Henry A. Bennett, can be reached on (703) 308-0101. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.
